

What's New and Improved in Timeslips 2012?

Names: Ability to use filters to purge closed names

When purging closed timekeepers, clients, tasks, or expenses, you can now set up selection filters to help choose which names to purge.

In previous versions of Timeslips there was no filtering capability when purging closed clients. This is a very helpful functional improvement in terms of maintaining your Timeslips database.

Current filters include client selection, nicknames and custom client fields such as client closed date for example.
