

What's New and Improved in Timeslips 2012?

Transactions: Prompt to create payments from account

If a client has an outstanding Accounts Receivable balance and you add money to one of their Funds accounts, Timeslips will now prompt you to create a Payment from account.

Here is another classic example of subtle new features enabling users to be more efficient and productive with their business processes.

Note: The automatic payment from account feature available when generating bills applies to current charges only. This new feature prompts the user entering the payment to create a funds transaction to pay a previously billed amount.

Further note for my law firm clients: Please consider this option carefully given local Bar rules regarding disbursement of client trust funds.
